Aim

Todesign and develop a Library Book Issue Management application in Zoho Creator by creating two Kanban reports and a dashboard using UI Builder. The application organises book issue requests based on Book Category and Member Type, allowing library staff to easily view and manage requests.

Procedure

1. Log in to Zoho Creator and create a new application named Library Book Issue Management.
2. Create the form Book_Issue_Request_Form.
3. Add the required fields using the Basic Fields available in Zoho Creator: Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, and Checkbox.
4. Organize the form into four sections: Member Details, Contact Details, Book Request Details, and Scheduling & Acknowledgement.
5. Configure field validations such as mandatory fields, email validation, phone validation, number range of 1–5 copies, and restriction of past dates.
6. Submit five sample book issue requests to create sample records.
7. Create the first report named Book_Issue_Request_Report.
8. Select Kanban as the report format and group the columns by Book Category.
9. Create the second report named Member_Type_Request_Report.
10. Select Kanban as the report format and group the columns by Member Type.
11. Create a custom page using UI Builder and name it Library_Issue_Dashboard.
12. Add the two Kanban reports to the dashboard.
13. Arrange and save the dashboard so that library staff can view book requests category-wise and member-type-wise.
14. Preview/publish the application and verify that the submitted records are displayed correctly in both reportsandthe dashboard.

Reports and Dashboard Overview

The application is built on asingleform, Book_Issue_Request_Form, which stores every book issue request along with the requesting member's details. Two Kanban-style reports are created on top of this form so that staff can view the same records grouped in different ways, and both reports are then combined on a single custom page (Library_Issue_Dashboard) built with UI Builder for a consolidated, at-a-glance view.

Component	Format / Grouping	Purpose
Book_Issue_Request_Report	Kanban, grouped by Book Category	Lets staff see how many requests fall under each book category (e.g. Mechanical

		Engineering, Computer Science & Engineering, Information Technology, Artificial Intelligence).
Member_Type_Request_Report	Kanban, grouped by Member Type	Lets staff see requests organised by who raised them — Student, Faculty, or Staff — as separate columns of cards.
Library_Issue_Dashboard	UI Builder custom page	Brings both Kanban reports together with supporting charts and summary widgets (approvals pending, requests declined, copies requested, purpose of borrowing) on one page.

Explanation of Screenshots

The followingscreenshots showthe Library_Issue_Dashboard as rendered in Zoho Creator after the sample book issue requests were submitted, along with the Kanban report grouped by Member Type.

1.Dashboard —Numberof Copies Requested

The top section of the Library_Issue_Dashboard shows the Number of Copies requested across submissions. The first widget is a bar chart plotting how many requests asked for 2, 3, or 5 copies, and the second is a line/trend widget plotting the Number of Copies against the Purpose of Borrowing (college purpose, college purposes, higher studies, research purposes, and school purposes), letting staff quickly spot which purpose is associated with the largest book quantities.

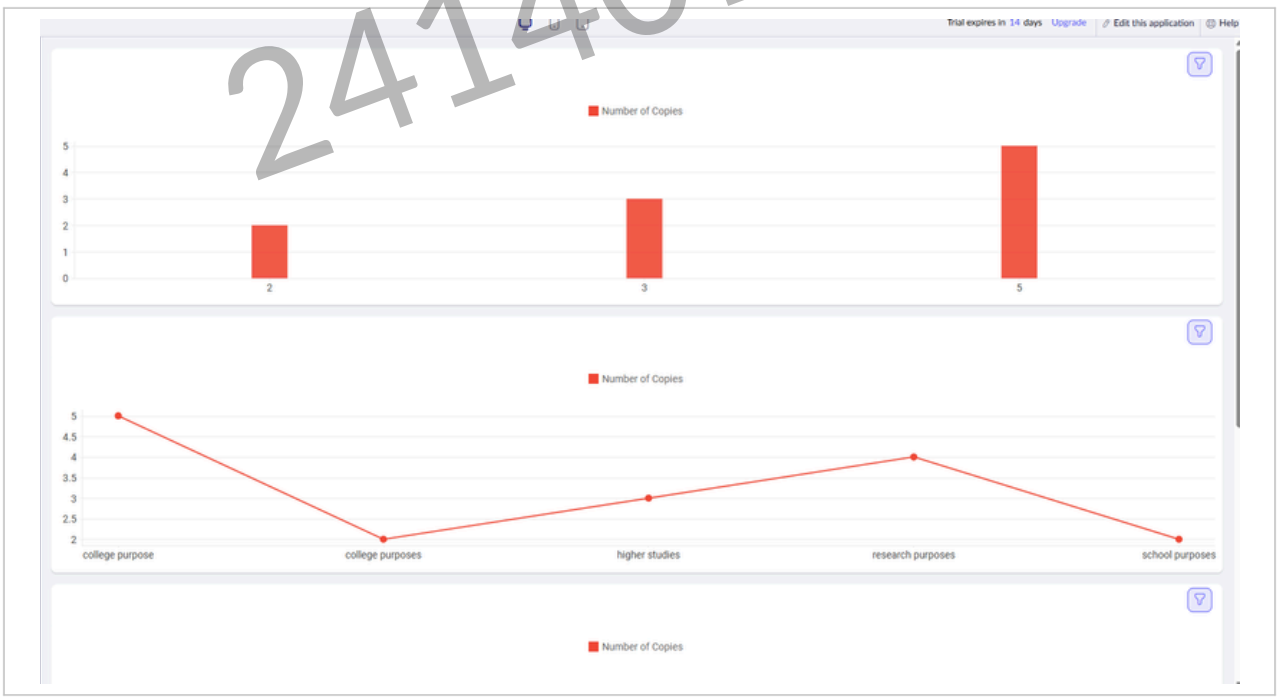

Fig. 1 — Dashboard: Number of Copies by request and by purpose of borrowing

2. Dashboard — Category-wise and Timeline Widgets

Scrollingfurther downthe dashboard shows the Purpose-of-Borrowing trend continuing at the top, followed by a radar chart that plots the Number of Copies requested against each Book Category — Computer Science & Engineering, Mechanical Engineering, Artificial Intelligence, and Information Technology — and a semi-donut widget that breaks down requests by their Preferred Issue Date.

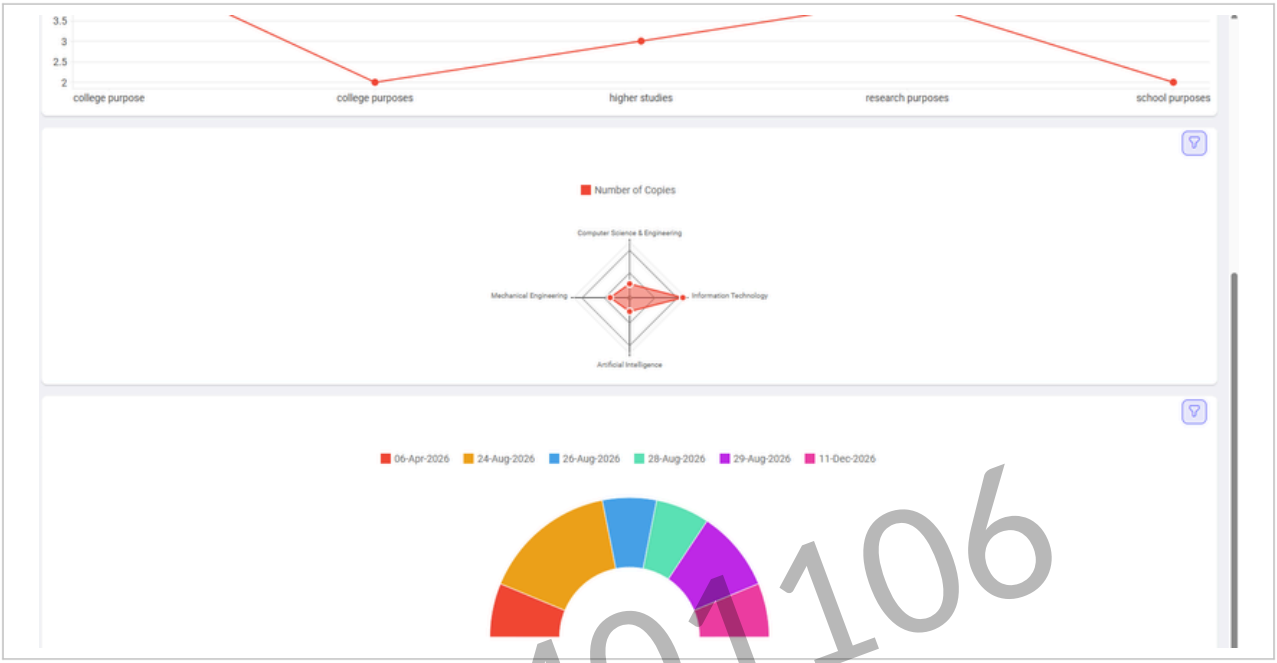

Fig. 2 — Dashboard: category-wise radar chart and issue-date distribution

3. Dashboard — Distribution Charts, Status Cards, and Member Records

Thelower partof the dashboard shows a donut chart comparingthe two purpose values (college purpose vs. college purposes), a bar-style summary of requests by Book Category, and two pie charts — one splitting requests by Number of Copies (2 / 3 / 5) and one splitting requests by Member Type (Student / Faculty / Staff). Alongside these, an Order Status panel lists the count of pending requests per book category, and two status cards report the number of Approvals pending (25) and Requests declined (10). The All Library Management table beneath the charts lists each member's Name, roll number, Member type, Email, and Contact number, confirming that the underlying Member Profile data feeding the dashboard is captured correctly.

Fig. 3 — Dashboard: distribution charts, status cards, and the member records table

4. Kanban Report — Grouped by Member Type

The Book_Issue_Request_Report,when switched toKanban view and grouped by Member Type, arranges the submitted requests into columns headed Student, Faculty, Staff, and Deleted & Others. Each card shows the requesting member's name and roll/register number, for example “Sreeman Naibal– 241401106” under Student and “Meera Shah – 22CSE078” under Faculty, giving staff an immediate, drag-and-drop friendly view of who has requests in progress under each member type.

Output

TheLibrary Book Issue Management application was successfully created in Zoho Creator with:

- Book_Issue_Request_Form containing all 13 Basic Field types.
- Book_Issue_Request_Report in Kanban format, grouped by Book Category.
- Member_Type_Request_Report in Kanban format, grouped by Member Type.
- Library_Issue_Dashboard created using UI Builder, containing both Kanban reports.
- Five sample book issue request records displayed successfully.

The application provides a structured and user-friendly way for library staff to view, categorize, filter, and manage book issue requests.
